Electrical box							
PTFE tape							
	Ecosub						
	The ECOSub+ Litre system consists of an industrial strength MDPE (Medium Density Polyethylene) tank complete with pipe work connections, submersible pump and a water filter. The pump sits in the bottom of the tank and is connected to the pressure switch. When the tap connected to pressure switch is turned on, this will start up the pump and pump water up and out of the tap.

Complete Pump fittings							
	Supercpmplete						
	The Supercomplete Rainwater Harvesting Tank is an automatic rainwater harvesting system which is used for collecting and supplying water on demand for both Domestic and Commercial use. This system consists of an industrial strength MDPE (Medium Density Polyethylene) tank complete with pipework connections, self priming inline pump, water filter. This system offers great savings on mainwater consumption and help towards the environment.

	Supercpmplete +						
	The Supercomplete + Rainwater Harvesting Tank is an automatic rainwater harvesting system which is used for collecting and supplying water on demand for both Domestic and Commercial use. This system consists of an industrial strength MDPE (Medium Density Polyethylene) tank complete with pipework connections as per the supercomplete system. This system has the additional electronic top up system added.
